OCEANER REC45 Freediving Wetsuit

The ideal wetsuit for recreational Freediving, Freedive Training and Spearfishing. (For Competitive Diving see the Oceaner “COMP 45”)

The REC 45 is constructed of YAMAMOTO 45. This neoprene is extremely warm and tough with an ultra stretch lycra on the outside to provide superior durability. All Oceaner Freediving REC45 suits utilize a cellular skin inner that helps to increase positive thermal qualities, providing a warmer, more comfortable performance experience.

Suit Features

- **Top Quality Yamamoto Rubber**

Yamamoto 45 is regarded as the highest quality material for Competitive Freediving and is used by multiple world record Freedivers such as Mandy-Rae Cruickshank, Martin Stepanek, Tanya Streeter, Alexey Molchanovs and many other world champions.

- **Raglan sleeve Design Raglan Sleeve Design**

Most currently available freediving wetsuits are constructed with a straight sleeve on the shoulder resulting in a tubular body with attached tubular arms. OCEANER suits use a Raglan Sleeve, a specific cut that provides a continuous shoulder curve from the base of the neck on down the arm providing a far more comfortable fit when the arms are in either down or over-head body position. This curvature also minimizes undesirable bunching of material around the shoulders when in an arm-up diving position

- **Jacket Bottom / Beaver Tail**

The hip length suit jacket is secured back to front with a Velcro clasped “Beaver Tail” This high use, high stress “tail” is constructed using once again a uniquely developed biothermic material to add strength and tear resistance where it is most needed. A 3 layer composite (bio/nylon/bio) in which 3 laminated layers create a nylon sandwich which provides the necessary strength without sacrificing all the stretch and thermal properties.

- **Seals**

Rubber Seals ring the face, wrists, and ankles. These seals limit water flow to a extent that even after hours in the water the lube solution used to get into the suit will still be inside

- **Color Options**

The REC45 comes in standard black but can be accented with white, blue, red, or gray coloured stitching as well as have gold accent panels under the arms.

OCEANER COMP45 Freediving Wetsuit

Suit Features

- **Biothermic**

All Oceaner COMP suits are designed for competition and are constructed with materials developed through bio thermal engineering, providing not only incredible thermal protection but peerless flexibility, breathability and comfort

- **Top Quality Yamamoto Rubber**

“Yamamoto 45, a revolutionary material of high quality”. This oil-free, composite rubber material is used on the OCEANER SCS COMP suit. Yamamoto 45 is regarded as the highest quality material available for competitive freediving wetsuits. OCEANER COMP45 suits are worn by a majority of world record freedivers such as Mandy-Rae Cruickshank, Martin Stepanek, Tanya Streeter, Alexey Molchanovs and many other champions.

- **Raglan Sleeve Design**

Most currently available freediving wetsuits are constructed with a straight sleeve on the shoulder resulting in a tubular body with attached tubular arms. OCEANER suits use a Raglan Sleeve, a specific cut that provides a continuous shoulder curve from the base of the neck on down the arm providing a far more comfortable fit when the arms are in either down or over-head body position. This curvature also minimizes undesirable bunching of material around the shoulders when in a arm-up diving position.

- **Jacket Bottom / Beaver Tail**

The hip length suit jacket is secured back to front with a Velcro clasped “Beaver Tail” This high use, high stress “tail” is constructed using once again a uniquely developed biothermic material to add strength and tear resistance where it is most needed. A 3 layer composite (bio/nylon/bio) in which 3 laminated layers create a nylon sandwich which provides the necessary strength without sacrificing all the stretch and thermal properties.

- **Seals**

Rubber Seals ring the face, wrists, and ankles. These seals limit water flow to a extent that even after hours in the water the lube solution used to get into the suit will still be inside.

- **Color Options**

There are many different color options available. The stock suit comes in Black (70% of the suit) with silver trim highlights (30% of suit). This provides a high level of visibility; a important feature for Freediver safety.

Further options include the following suit colors: Red, Blue, Yellow, Graphite, Green, Purple, Gold, Silver and Black.

OCEANER SPEARFISHING & Freediving Wetsuits

- **The ultimate in warmth, flexibility and stealth underwater visibility**
- **Lycra outer—split cell skin inner**
- **Loading pad, kneepads, attached hood**

PRO39—Ultimate Spearfishing Suit—constructed with Yamamoto #39 material which is super light providing strength and flexibility for repeated dives to moderate depth without sustaining permanent compression

CO45—Crossover Spearfish and Freediving Suit—made with Yamamoto #45 material which is soft, resilient and stretchy of highest quality providing strength and flexibility for repeated dives to deepest depths without permanent compression .

- **Raglan Sleeve Design and Underarm Gusset**

Most currently available freediving and spearfishing wetsuits are constructed with a straight sleeve on the shoulder resulting in a tubular body with attached tubular arms. OCEANER suits use a Raglan Sleeve, a specific cut that provides a continuous shoulder curve from the base of the neck on down the arm providing a far more comfortable fit when the arms are in either down or overhead body position. This curvature also minimizes undesirable bunching of material around the shoulders when in an arm-up streamlined diving position..

- **Jacket Bottom / Beaver Tail**

The hip length suit jacket is secured back to front with a Velcro clasped “Beaver Tail” This high use, high stress “tail” is constructed using once again a uniquely developed material to add strength and tear resistance where it is most needed. A 3 layer composite in which 3 laminated layers create a nylon sandwich which provides the necessary strength without sacrificing all the stretch and thermal properties. Water is almost completely restricted from entering at the bottom of the jacket.

- **Attached Hood**

Keeps the head warm and restricts water from entering the jacket at the neck and flowing down the back.

- **Seals**

Rubber Seals ring the face, wrists, and ankles. These seals limit water flow to a extent that even after hours in the water the lube solution used to get into the suit will still be inside.

- **Color and Thickness Options**

Three Lycra colour CAMOUFLAGE patterns have been developed for warm water and cold water conditions: Green, Grey and Wine. Two thickness 3mm and 6mm will keep any hunter warm in all water temperatures.

CUSTOM CHART FOR FREEDIVING SUITS

MEASURING INSTRUCTIONS

Tapes can stretch over time, check periodically against a yardstick.

When taking measurements for a custom wetsuit, customer should be in a bathing suit. When taking measurements for a customer drysuit, customer should be in undergarments to be worn under the drysuit when diving. For circumference measurements, tape should be snug but not pulled tight. Make crotch measurements with a pen or ruler held at the customers highest point on the crotch. Record the customer's height, weight, and age is very important. A brief coment on the customers physical condition would be helpful. HIP measurement is widest part of hip at the crotch level.

MEASUREMENT DESCRIPTIONS

All measurements must be in inches.

1. Forehead (just above eyebrows)
2. Neck
3. Biceps (3" from armpit)
4. Forearm (largest point)
5. Wrist (just above bone)
6. Wrist to armpit (inside centre of armpit)
7. Chest (at nipples, arms at side)
8. Waist (at narrowest point)
9. Hips (widest point)
10. Legs at top (highest point)
11. Calf (widest point)
12. Ankle (just above inside bone)
13. Crotch to ankle (above inside bone)
14. Ankle to waist
15. Top of shoulder through crotch, back to top of shoulder
