

OCEANER SPORTING GOODS CANADA INC.

HI PERFORMANCE SERIES DRYSUIT

Constructed with Yamamoto 3.5mm neoprene including double layers of titanium that provides inherent warmth and a very high stretch durable outer coating which is smooth skinned so it moves through the water with very little resistance. It is extremely abrasion resistance.

Neoprene is the preferred material for drysuit diving as it allows the diver to be streamlined which creates less drag; increasing the bottom time and enables the diver to have unmatched dexterity and unrestricted flexibility.

The inner seams are heat pressure taped and guaranteed not to leak.

YKK dry zipper ensures the diver ease of donning and doffing. The seals are a unique 3mm neoprene StretchTex™ that are not only comfy but tough which means they will not tear or run as latex seals often do.

SiTec Adjustable Valves with exhaust valve on the forearm makes dumping air fast and increasing the ability to achieve neutral buoyancy. If one's personal preference prefers exhaust valve be placed on the shoulder, we happily offer that option.

Performance stretch knee pads are standard, the tapered leg design reduces air flow to the feet making each dive safer.

Bellows pocket on the right hip.

Oceaner Performance boots with elevated heel and arch supports.

Custom sizes are available
